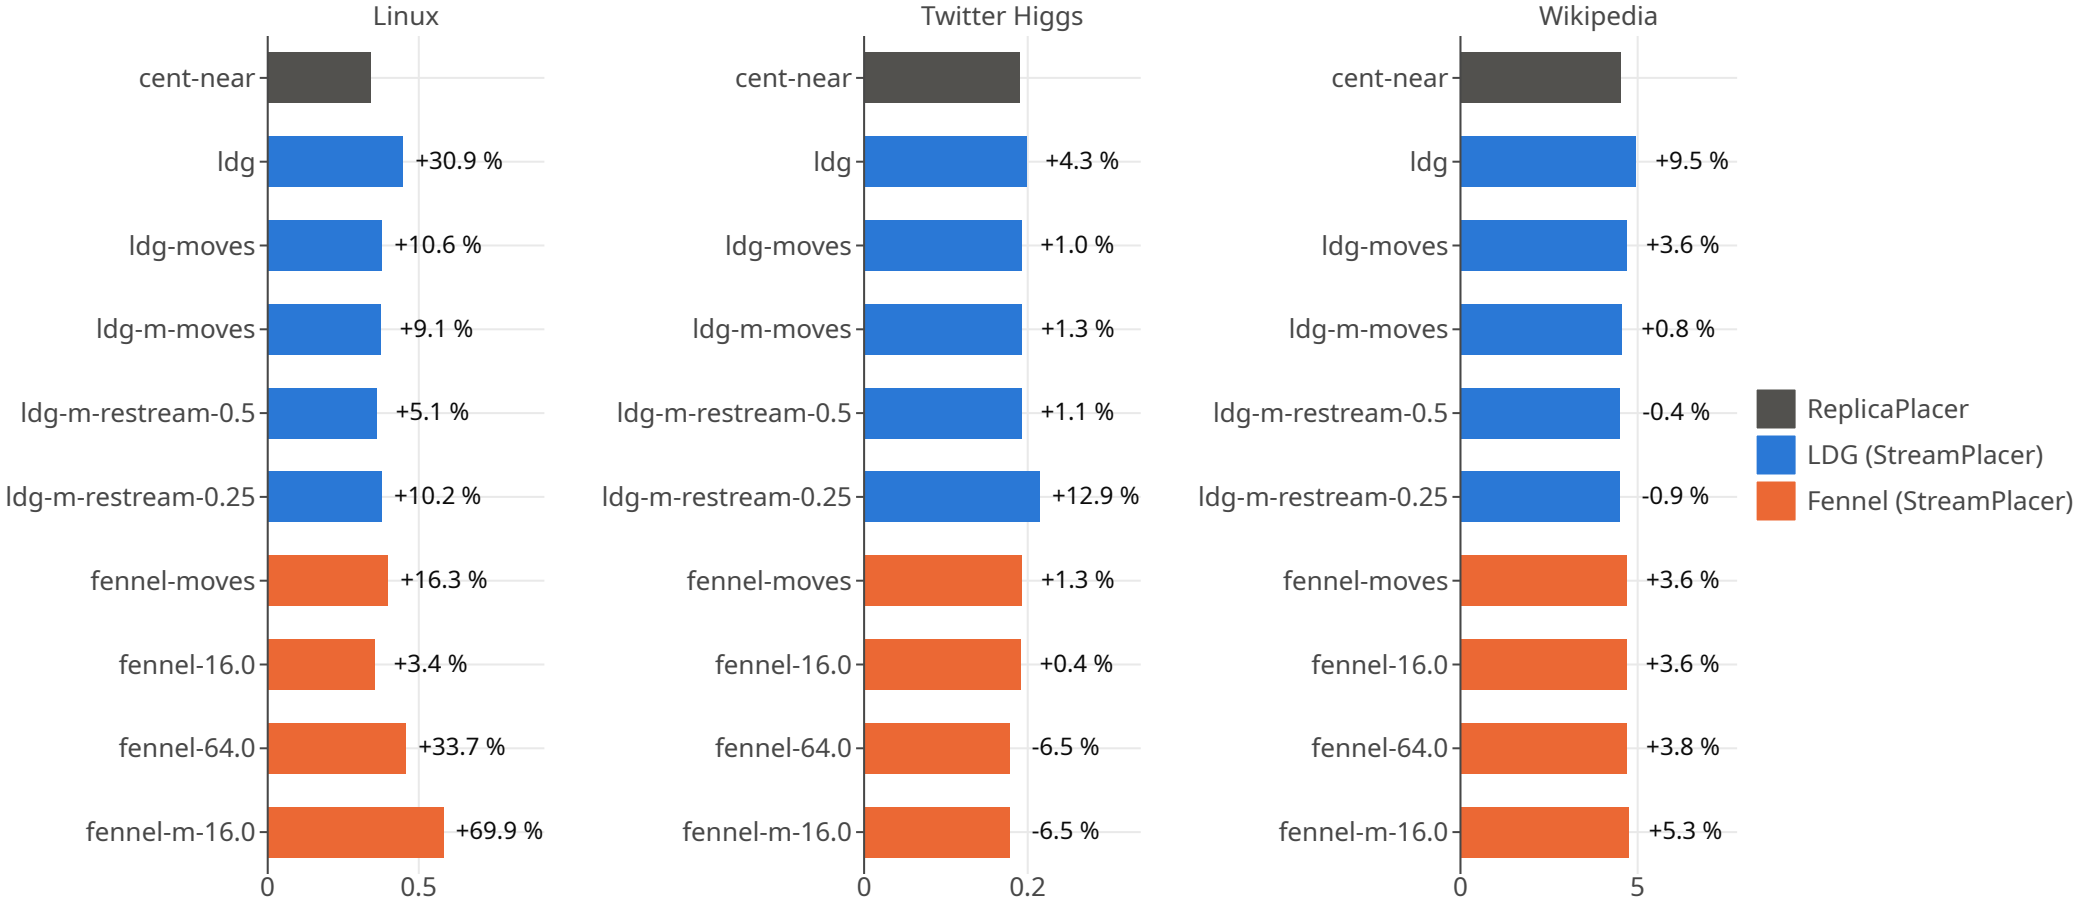
Streaming partitioning scores against our placer (16 servers, k = 2, LRU)

cent-near: ReplicaPlacer with near placement; ldg / fennel: StreamPlacer, a new file placed by the score
-moves: placed again when its debt reaches alpha, if the gain covers the copies
fennel-<s>: -moves with the size penalty scaled by s; -m: a replica scored by the pairs the ones before it leave remote
-restream-<t>: also a pass over every file each half-life, keeping gains >= t * alpha per copy; labels: change against cent-near



total cost: remote traversals + 8 x copies (millions)
